You also have the option to opt-out of these cookies. But opting out of some of these cookies may affect your browsing experience. One of the more sensible default security features on Android devices is not allowing users to install apps from outside the Play Store. But with plenty of great apps you can find outside the Play Store, you may want to venture beyond those walls every now and then. Luckily, it’s fairly easy to install apps from unknown sources on Android. Change in Installation Method Since Android 8.0, the method to install apps from unknown sources has changed. Instead of the previous method where you gave permission to download APKs through an existing app on your phone, the newer installation method requires you to give permission to specific apps that are allowed to install APKs from unknown sources. Let’s check the steps for different Android versions to grant this permission. Install Apps from Unknown Sources in Android 10, 11, and 12 Open Settings on your phone. Go to “Apps,” then tap on “Special app access.” If you don’t find it, go to “Advanced” followed by “Special app access.” Tap on “Install unknown apps.” Tap on the app you will use to install the third-party apps. This is usually a browser or the Files app. We’re using Chrome for this example.Enable the toggle next to “Allow from this source.” Tap on the APK file to install it. Install Apps from Unknown Sources on Samsung Open Settings and go to “Apps.”Tap on the three-dot icon at the top and select “Special access” from the menu. Tap the “Install unknown apps” option. Enable the toggle next to the app you will use to install the third-party apps. Note: if the above steps don’t work, go to “Settings → Biometrics and security (or Privacy) → Install unknown apps.” Enable the toggle for the required app. Install Apps from Unknown Sources in Android 8.0 Oreo and 9.0 Pie Go to “Settings -> Apps & notifications -> Advanced -> Special app access -> Install unknown apps.” Select the app (usually your Internet browser) that you want to install from unknown sources.Tap “Allow from this source” to enable unknown sources for that specific app. Install Apps from Unknown Sources on Android 7 Nougat and Older To install from unknown sources in Android N and older, you can enable and disable the feature right from the settings panel. Open the App Drawer on your Android device and tap on the “Settings” icon. It will open the settings panel where you can change all the settings related to your device. Also, you can pull down the notification bar twice and tap on the gear icon to open the Settings menu. Scroll all the way down until you see an option saying “Security & fingerprint.” On the devices that do not have the fingerprint feature, you will only see the “Security” option. Tap on the option you have on your device, and it will open the security settings menu for your device. Scroll down and to see an option that says “Unknown sources.” This option is what controls whether apps from outside the Play Store can be installed on your device. By default, the option is disabled.Enable the toggle next to the option to turn the feature on. You will get the following prompt before the feature can be enabled on your device. It mentions the risks involved with installing apps from unknown sources. Tap on “OK.” With the feature enabled on your device, you may exit out of the Settings menu and install the APK. Frequently Asked Questions 1. Why can’t I install an APK on my phone? It could be due to insufficient storage space on your phone or a corrupted APK file. Try downloading the files again. Another reason could be that the app isn’t compatible with your phone. 2. How can I uninstall an app that I installed using an APK? The steps to uninstall an app installed via an APK file are the same as that of regular apps. Touch and hold the app icon in the app drawer and select “Uninstall.” Alternatively, go to “Settings – Apps.” Tap on the app to be removed and press the “Uninstall” button. 3. Do APK files have viruses? APK files can sometimes be infected with malware. Check out our guide on how to scan APK files for viruses. Is this article useful? 05 Aug 2020, 03:29 PM ISTWith Android now ubiquitous, the popular operating system is also the favourite target for miscreants. While the chances of a hack are not very high, in case your phone is, here’s how you can tell.If there’s a sudden increase in the number of pop-up ads on your device, especially ones from unknown sources, you could be in trouble. While the Play Store has millions of apps, there’s no way to get an app on your phone without your knowledge which means if you find an app you don’t remember installing, you’ve been hacked.Another instance when hacking becomes obvious is when you install a new app and it disappears from your app drawer or your homescreen, that could mean the app is already on your phone and was not put there by you.A sudden dip in battery life, especially on a new phone is indicative of someone meddling with your device. Get it checked out. If there’s an increase in mobile data consumption, and your usage doesn’t tally up, be sure to check with your service provider and then with a device expert. In cases where you are unable to update your phone or the apps on it are crashing constantly and refusing to update, you could have malware on your device. android How installing unknown apps works in various versions of Android, and why you shouldn’t do it. Hugh Aver September 9, 2021 For Android users, installing applications from Google Play, and Google Play only, is the wise choice. With its strong safety rules, official app monitoring, plentiful user reviews, and security researcher scrutiny, Android’s official store tends to be a safe place for downloading apps. Even when malware does make it to Google Play, it is quickly identified and removed. Android device owners do, however, also have the option to download and install apps from third-party sources. But does the freedom outweigh the danger? Allowing or denying alternative installation On the one hand, having the ability to shop outside of the Google Play store can be quite useful; not every app is available there. On the other hand, that freedom comes with an increased risk of infection, because outside of Google Play, apps lose Google’s quality and safety oversight. Together with a program’s installer — or even instead of it — dangerous apps can get onto users’ devices and steal personal data, money, or both. Here are just a few examples of such attacks: The above represent a sampling of why new phones come with external software installation disabled. To avoid falling victim to schemes that rely on external installations, don’t be tempted to enable installation of unknown apps, and if you have, turn it off immediately. Here’s how. How to turn off installation of unknown apps in Android 8 and later In the latest versions of Android, the relevant feature is called Install unknown apps, and it is enabled separately for each app. If you have allowed installation from unknown sources for some apps, you will need to disable it separately for each app. Here’s how to do it: Open the system settings on your device; Choose Apps and notifications; Select Advanced and go to Special app access; Select Install unknown apps; Check what is listed under each app installed on your phone. If you see Allowed, select the app in the list and disable installation of unknown applications. How to disable installation of unknown apps in Android 8 and later Please note, we’re using the names of the settings in stock Android. Manufacturers often modify the standard Android interface, so some menu items may have different names on your phone. How to turn off installation from unknown sources in Android 7 and earlier In Android 7 and earlier the setting is called Unknown sources, and there’s just one switch that turns installation of non-Google Play apps on or off for the entire system. Here’s how to find it: Open the system settings on your device; Go to Security; Scroll down to Unknown sources and make sure it’s disabled. How to disable installation of apps from unknown sources in Android 6 and 7 At first glance, managing this setting seems much easier in older versions of Android, but from a security viewpoint, things aren’t that straightforward. If you accidentally allow installation of unknown apps in Android 6 or 7, then any app at all can download malicious files — and that includes apps you install later. How to safely download an app that’s not on Google Play What if a program you need is not available in the official store, but you still need to install it? Search for similar apps. Try looking for alternatives in the official store. Maybe there is an app on Google Play with functions that suit your needs. Scan the file before installing. Even if you can’t do without a third-party source, don’t rush to change your settings. First, download the installation file, and before launching it, scan it with your mobile antivirus solution. Check permissions. Consider the list of permissions the app requests during installation. If a program demands too much, try to find something similar with more modest requests. Disable installation of unknown apps. Remember to change your settings back after installation. Don’t leave your phone open to malware!
